

# Job Task

For Front-End Developer

@ [Blackdeep Technologies](#)

## Overview

The task is targeting developers with beginner to mid level of experience in Front-end development. The main goal is the developer to prove his understanding of front-end programming basics and motivation of learning new things.

## Prerequisites

The following software and experience are required to fulfill the task:

- Typescript
- Understanding of HTML5 best practices and semantics.
- Experience with Git and Github
- Experience with React 2+ years

Great addition will be:

- Using design patterns
- Using schema validation
- Using testing frameworks

## Task

You need to create a form submission for user registration.

The form should have 2 steps.

On step 1 user should fill in:

- Names
- Password / Confirmation
- Interests (multiple choice, max 2 options - Sports, Music, Dancing, Games)
- Next button

On step 2 user should be able to upload avatar

After that the user will submit the form.

The form should have validation for all fields.

No real server/backend is required but mocks can be developed by choice.

The app must be written in React with TypeScript.

The form must use react-form-hook

The UI must be done with Chakra UI

## Deployment

Deploy the application and source code to your Github profile. Include a README.md where describe the project, any comments you may have and instructions for compilation/running.

# Happy Coding
